

Proposal

Client: Ariana Flores Pro Sports Photography

Prepared By: DJ Moody

Course: Advanced Web Programming

Purpose: Website Development Proposal

1. Project Overview

This proposal outlines the development of a modern, responsive, and high-performance website for Ariana Flores Pro Sports Photography using **WordPress.org** as the content management system. The website will showcase Ariana's professional sports photography across multiple categories, highlight her mixed photography style, and provide a streamlined booking experience for clients, athletes, and media organizations. The project includes theme customization, plugin integration, database configuration, security features, analytics, and a cost-effective hosting solution.

2. Client Background

Ariana Flores is a professional sports photographer who covers major sporting events across the United States, including football, basketball, baseball, soccer, combat sports, and track and field. Her goal is to expand her online presence, attract new clients, and present her work in a visually compelling and organized format. A WordPress-based website will allow her to easily update galleries and manage content without technical expertise.

3. Project Goals

- Showcase high-quality sports photography in a dynamic and organized format.
- Provide a simple and effective booking system for potential clients.
- Improve Ariana's online visibility and brand identity.
- Deliver fast performance, strong security, and mobile-first design.
- Support long-term scalability and future content updates through WordPress.

4. Website Direction

The website will follow a bold, modern, and energetic design direction inspired by professional sports branding. WordPress will be customized using a lightweight, photography-friendly theme. The layout will emphasize motion, contrast, and large imagery. The user experience will be intuitive and mobile-first, with dynamic galleries, a booking form, search and filter tools, and an admin dashboard for content management.

5. Project Scope

Front-End Development (WordPress Customization)

- Customize WordPress theme for layout and branding
- Apply custom CSS for styling
- Build homepage hero section
- Create sports gallery pages
- Set up navigation and responsive design

Back-End Development (WordPress Configuration)

- WordPress installation and setup
- Plugin configuration for galleries, booking, SEO, and security
- Custom post types for sports categories (if needed)
- Database configuration through WordPress's MySQL structure
- Admin dashboard setup for easy content updates

API Integration

- Google Maps API for location display
- Optional Unsplash API for placeholder images

Security Measures

- Wordfence or similar security plugin
- SSL certificate through Hostinger
- Secure login configuration
- Form validation and spam protection

Hosting

The website will be hosted using Hostinger's WordPress-optimized shared hosting, which provides an affordable and reliable solution suitable for student projects and small business websites. Hostinger supports PHP, MySQL, and WordPress, includes a free SSL certificate, and offers fast global servers. This hosting option keeps costs low while still providing the performance and flexibility required for a photography-focused website.

6. Client Survey (40 Questions)

The complete 40-question Client Discovery Survey is provided at the end of this document.

7. Technical Documentation (WordPress-Specific)

Maintenance Options

Ariana will manage content through the WordPress admin dashboard, including photo uploads, gallery updates, blog posts, and booking inquiries. Technical maintenance such as plugin updates, theme updates, and security monitoring will be handled by the developer as needed.

Technical Options

- CMS: WordPress.org
- Front-End: Theme customization, HTML5, CSS3, JavaScript
- Back-End: PHP and MySQL (WordPress core)
- Plugins: Gallery plugin, booking plugin, SEO plugin, security plugin
- Hosting: Hostinger shared hosting

Analytics and Tracking

- Google Analytics integration
- Optional heatmap tools
- Engagement tracking for galleries and categories

Search Functionality

- WordPress search bar
- Optional filter plugin for sorting by sport type, event date, or category

Database Structure

WordPress uses a MySQL database with tables for:

- Posts and pages
- Media library items
- Custom post types (if used)
- User accounts
- Plugin-generated data (forms, galleries, etc.)

Performance Requirements

- Image compression using a plugin such as Smush or ShortPixel
- Caching plugin for faster load times
- Lazy loading for galleries
- Mobile-first optimization

Hosting Information

Hostinger provides PHP support, MySQL databases, SSL encryption, one-click WordPress installation, and a user-friendly control panel. This hosting option is cost-effective and appropriate for both student projects and small business websites.

8. Project Summary

This project will deliver a modern, secure, and visually dynamic WordPress website that showcases Ariana's professional sports photography across multiple categories. The site will include dynamic galleries, a booking system, search and filter tools, plugin integrations, and a user-friendly admin dashboard. The final product will support Ariana's long-term brand growth and provide a strong digital presence for her work.

9. Goals and Objectives

- Highlight Ariana's photography
- Streamline client communication
- Improve online visibility
- Support future expansion

10. Digital Marketing Options

- SEO optimization using RankMath or Yoast
- Social media integration
- Google Business profile
- Newsletter signup
- Optional blog

11. Key Features

- Dynamic galleries
- Booking form
- Admin dashboard
- Search and filter system
- API integrations
- Mobile-first design
- Secure login system

12. Target Audience

- Professional athletes
- Sports teams
- Media outlets
- Event organizers
- Sports fans
- Brand sponsors

13. Competitors

- Local sports photographers
- ESPN freelancers
- Getty Images contributors
- Sports Illustrated photographers
- Regional media outlets

14. Branding Options

- Bold typography
- High-contrast colors
- Motion-inspired graphics
- Clean, modern layout

15. Project Timeline

- Week 1: Planning, survey, wireframes
- Week 2: WordPress installation and theme customization
- Week 3: Plugin configuration and back-end setup
- Week 4: API integration
- Week 5: Testing and optimization
- Week 6: Deployment and final review

16. Project Budget

- Estimated hours: 40–60
- Rate: \$25–\$35 per hour
- Estimated total: \$1,000–\$2,100

17. Time Estimation

- Front-end customization: 12–15 hours
- Back-end configuration: 15–20 hours
- Plugin and API integration: 5–8 hours
- Testing: 5–7 hours
- Deployment: 2–3 hours

18. Website URL (Planned)

The planned website address for this project is:

www.afloressportsphotography.com

This domain name represents the client's brand and will be used once the website is deployed to a hosting provider. A temporary development link may also be used during the build phase, such as a Hostinger preview URL or a local development address.
