

Usability Testing Report

Usability Testing

A usability test was conducted on the Adriana Sports Photography website to identify issues related to broken links, grammar errors, color contrast, and accessibility. The goal of this test was to ensure that the website provided a smooth, readable, and accessible experience for all users. Each category was evaluated using standard testing techniques, and the results were documented along with any corrections made.

Broken Link Testing

All links on the website were manually tested by clicking through each page, including the homepage, gallery, and contact page. This technique ensures that every link directs the user to the correct destination without errors. No broken links were found during testing. All navigation and gallery links functioned properly, confirming that the site structure was correctly connected.

Grammar and Content Review

A full grammar and content review was performed by reading all text on the website, including headings, descriptions, and contact information. This technique helps identify spelling mistakes, unclear sentences, or awkward phrasing. Minor grammar adjustments were made to improve clarity and professionalism. Some sentences were simplified, punctuation was corrected, and wording was refined to ensure the text was easy to understand.

Color Contrast Evaluation

The website's color scheme was visually inspected to ensure that text was readable against its background. This technique checks whether users can easily read content without straining their eyes. All text displayed clearly, and no areas showed poor contrast. The chosen colors worked well on both desktop and mobile screens, providing strong readability throughout the site.

Accessibility Review

Basic accessibility checks were performed to ensure the site was usable for a wide range of users. Images were reviewed to confirm that alt text was included where appropriate. Keyboard navigation was tested by moving through the site without using a mouse, ensuring that users relying on keyboard input could still access all content. Headings and text structure were checked for consistency. No major accessibility issues were found, and the site functioned correctly with keyboard navigation and screen-reader-friendly formatting.

Findings and Correction Adjustments

Overall, the website performed well during usability testing. No broken links were discovered, and only minor grammar corrections were needed. Color contrast was strong across all pages, and accessibility features such as alt text and keyboard navigation were functioning correctly. The small adjustments made during testing improved clarity, readability, and overall user experience. With these corrections completed, the website meets basic usability standards and is ready for public use.

Conclusion

The adjustments made during the usability testing process significantly enhanced the overall experience for end users. Correcting grammar issues improved clarity and professionalism, making the content easier to understand. Verifying color contrast ensured that text remained readable across all devices, reducing eye strain and improving accessibility. The confirmation that all links were functioning properly strengthened navigation and prevented user frustration. Accessibility checks, including alt text and keyboard navigation, ensured that the site could be used by individuals with different needs and browsing methods. Together, these improvements created a smoother, more intuitive, and more inclusive experience, ensuring that visitors can interact with the Adriana Sports Photography website without barriers.
