Project: Capstone Web Application – Module 1 Communication Brief

Overview

This communication brief outlines the purpose, audience, messaging strategy, and communication approach for Module 1 of the Capstone Web Application project. The goal of this document is to ensure that all communication related to the project is presented in a clear, professional, and academically appropriate manner. Module 1 focuses on establishing the project's technical foundation, and this brief explains how information about that work will be conveyed to the instructor and future evaluators.

Purpose of Communication

The purpose of communication during Module 1 is to document the initial setup of the project and provide accurate updates regarding progress. This includes communicating the creation of the repository, the establishment of the branching structure, the configuration of the development environment, and the setup of the project board. Clear and professional communication ensures that the instructor can evaluate the work effectively and that the project maintains a consistent standard of documentation from the beginning.

Target Audience

The primary audience for this communication is **my course instructor**, who evaluates the accuracy, clarity, and professionalism of the project documentation for Module 1. This document is written to meet the instructor's expectations for technical communication and to demonstrate a clear understanding of the project's setup and workflow. A secondary audience includes **future instructors or evaluators** who may review this material in later modules to assess continuity and progress. All content is presented in a formal, organized manner to ensure it is appropriate for academic evaluation.

Key Messages

Communication for Module 1 emphasizes the following key points:

- The project has been established using industry-standard tools and development practices.
- The repository, branching structure, and project board have been created and organized appropriately.
- The development environment has been configured correctly and is ready for future modules.
- All work completed in Module 1 aligns with academic expectations and demonstrates professional documentation practices.

These messages ensure that the instructor and any future evaluators understand the project's foundation and the student's commitment to maintaining a structured workflow.

Communication Strategy

The communication strategy for Module 1 prioritizes clarity, professionalism, and consistency. The following methods support this approach:

Written Documentation:

All documents, including progress reports and technical summaries, are written using complete sentences, correct grammar, and a formal tone.

Version Control Practices:

Commits are written with clear, descriptive messages, and branches are organized to reflect the development workflow. This ensures transparency and traceability.

Project Board Management:

Tasks are added, updated, and moved across the board to reflect accurate progress. This visual communication supports organization and accountability.

Repository Structure:

Files are organized logically, and unnecessary items are excluded through the .gitignore file. This ensures that the repository remains clean and easy to review.

Tools and Channels

Communication for Module 1 is delivered through the following channels:

- **GitHub Repository** – for code, documentation, and version control
- **GitHub Project Board** – for task tracking and workflow visualization
- **Technical Documentation** – for formal written communication
- **Commit Messages** – for ongoing updates during development

These channels ensure that communication remains centralized, accessible, and professionally presented.

Tone and Style

All communication for Module 1 is written in a formal, objective, and concise tone. Sentences are complete, grammatically correct, and free of informal language. The writing style reflects academic and professional standards, ensuring that the documentation is suitable for evaluation and consistent with expectations for technical communication.

Conclusion

The communication approach for Module 1 establishes a strong foundation for the capstone project by ensuring that all information is presented clearly, professionally, and consistently. By maintaining high standards in documentation, version control, and task organization, the project is well-positioned for success in future modules. This communication brief outlines the strategy that will guide all project-related communication moving forward.
