

Client Meeting Summary

Client: Ariana Flores — Pro Sports Photography

Following the completion of the Module 3 video presentation, a formal follow-up meeting was conducted with the client, **Ariana Flores**, to review the current status of the website and verify that all implemented features align with the project requirements. The purpose of this meeting was to simulate a professional client interaction and confirm approval prior to initiating the final testing phase.

During the meeting, the full functionality of the website was demonstrated, including the finalized layout and design, the navigation structure, and the responsive formatting across devices. The user registration and login system was presented, including account creation, authentication, and secure profile access. Database operations were reviewed to confirm the ability to create, read, update, delete, and search user information. The back-end configuration was explained, detailing how user sessions, data flow, and plugin integrations are managed within the system. Additionally, the API integrations were demonstrated, including the Google Maps location display and the real-time weather widget powered by OpenWeatherMap.

The client was asked to confirm whether the website met all expectations, whether the demonstrated features were functioning correctly, and whether any revisions were necessary before proceeding. The client indicated that the website satisfies all project requirements and requested no additional changes. This confirmation is consistent with the previously completed client sign-off document.

With client approval established, the project is cleared to advance to the final testing assignments, during which all features will be evaluated for performance, reliability, and readiness for full deployment.
